

OLIVE TREES

KORONEIKI i-38

KORONEIKI i-38

Denomination and synonymy

A variety from Greece, where it is also known as Koroni, Kritikia, Ladolia and Psylolia.

Cultivation area

Occupies 50-60% of the olive-growing surface area in its country of origin. Since it is one of the varieties used on super-intensive plantations, it is also being planted in many other countries on several continents.

Agronomic and commercial consideration

Average vitality and open canopy, very high productivity, fat content around 20%, excellent oil quality and very stable. Very early entry into production. A variety of interest for super-intensive plantations.

Resistance, tolerance and susceptibility

Olive knot Susceptible

Leaf Spot Resistant

Verticillium Moderately susceptible

Other It is resistant to drought, but does not tolerate cold.

Morphological characteristics

Leaf

Has a short, narrow leaf with an elliptic-spear shape.

Fruit

Oval and slightly asymmetric; it ripens early.

Pit

Small, long pit; slightly asymmetric.
